1. Project web portal

CRISIS project web site, <http://www.crisis-project.org/> (Fig.1) is designed to respond to the ultimate objective of the dissemination strategy i.e. to ensure that the national emergency and disaster management authorities in the cross-border region have maximum benefit from project results and achievements. More specifically, it is providing maximum visibility of the project and its outcomes among different stakeholders and efficient information and communication among the partners.

It serves as a central point for information about the project. The design was developed based on the CRISIS logo and is in keeping with the overall visual identity of the project. The structure was conceived to minimise the number of clicks needed to reach key information. In terms of content, the aim is to provide frequent updates to the site with information that is up to date, relevant, trustworthy and written in an accessible language (i.e. excluding project specific references to ‘work packages’ or ‘deliverables’).

Figure 1. CRISIS web page (Home menu)

It is structured in six different menus: Home, About, Work Packages, Deliverables, Participants and Events.

In the *About* menu (Fig. 2), overview, objectives and expected results of the project are given.

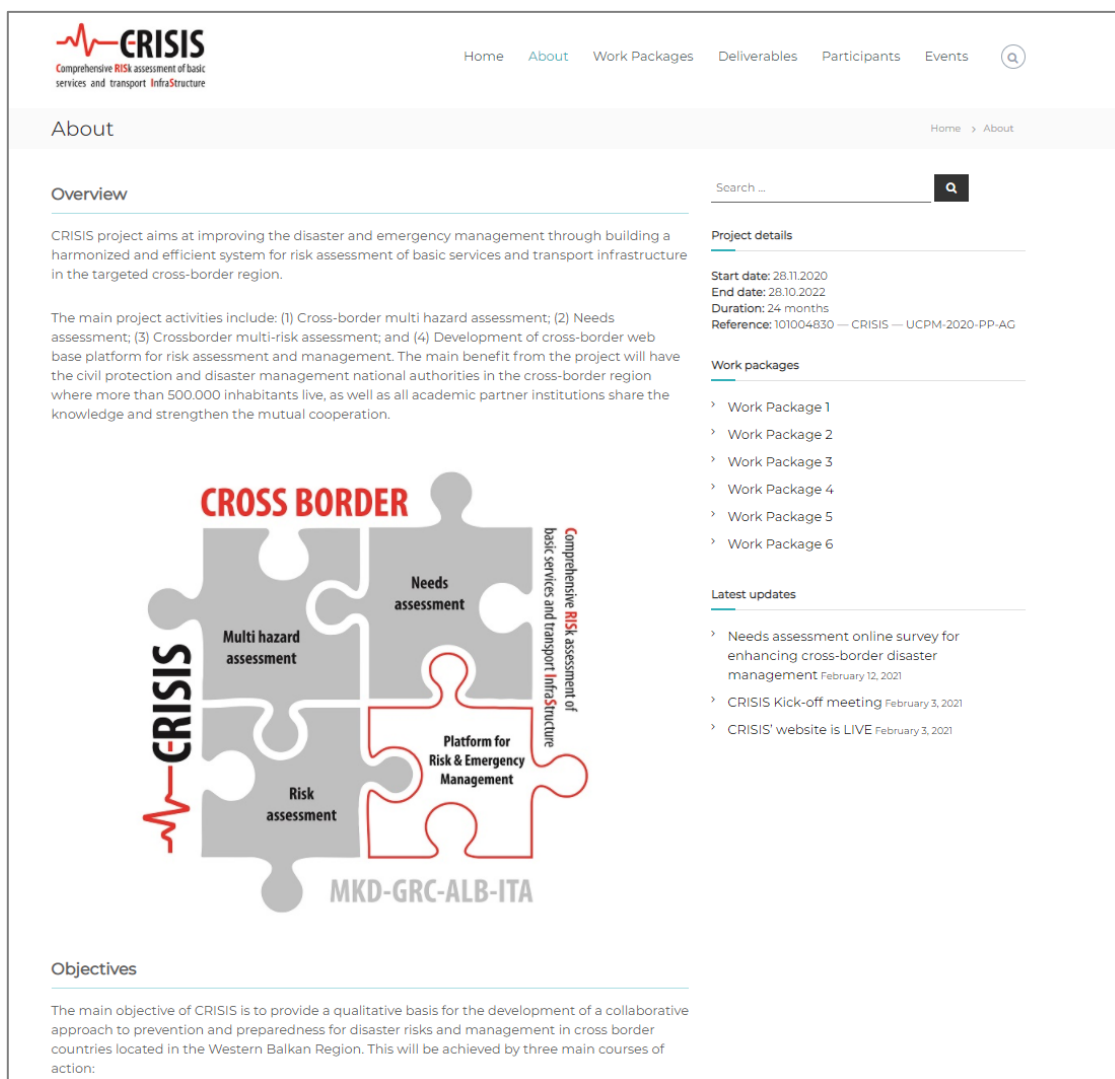

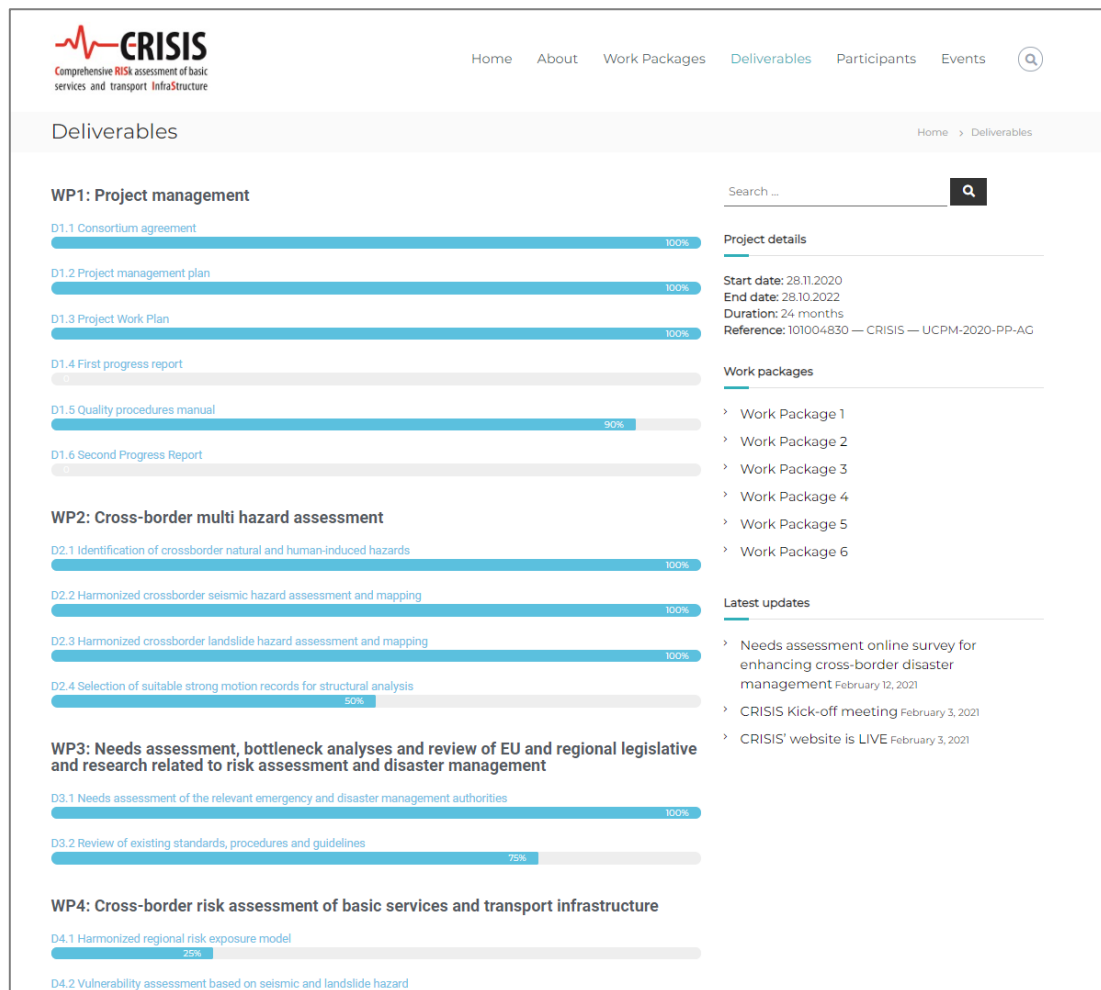

Figure 2. CRISIS web page (*About* menu)

Work packages with links to each of them accompanied by short description of the objectives are presented in the *Work Package* menu.

Deliverables of each WP with percentages of their accomplishment are illustrated in the Deliverables menu, (Fig. 3).

In the *Participant* menu, short description of each partner institution is given. Events menu is created for sharing all events (past and future) related to the project activities.
